HOBBIES

BEGINNING

In my engineering university, when I created my first 3d model for my project. Instantly, I felt tremendous love for animation. It was my goal to create my own animation film. In order to learn and enhance my experience, I participated in intra-college competitions.

I was competing against painters and art students. It was impossible for me to win against professionals but my ideas and attention to detail helped me win many awards.

CONCEPT ARTS

After finalizing the screenplay, concept art is the first step towards animation. I started learning advanced photoshop and blender from YouTube tutorials & books. I wanted to get a job related to graphics.

ANIMATION

In Ireland, I got a job in Digiworld as a video designer. I used my prior knowledge of Adobe After effects and Premiere Pro for making videos. One day, I had the idea of making a short film in Blender. After learning some skills, finally I made my first animation short film which I uploaded on my youtube channel Entertaindo. Although, I made an animation movie, but I still found a huge gap in my knowledge of animation which can only be gained if I attend an art school.
